

## Speed Survey Proposal

To place three Automatic Traffic Counting (ATC) sensors at the locations shown on the plan below.

Following receipt of the data, to receive a short summary of findings to include a summary of vehicle speeds, flows and composition at those points. Also, to be included, a brief review of what the next steps might be in terms of how the survey might influence the provision of traffic management /calming in the village.

Assuming the matter can be dealt with as a desk top exercises, the estimated total cost will be £1,000 + VAT.

The cost of each ATC (a strip across the road) is £250+VAT.

The location of the ATC's is open for consultation.
